

Adopting the ISO 55000 Asset Management Framework for the Water and Wastewater Industries

Mark West
Senior Director, Reliability Services

What Happens When You Don't Have a Good Strategy?

ISO 55000 for Power – Today's Discussion

RISK AND RELIABILITY

ADOPTING THE ISO 55000 ASSET MANAGEMENT FRAMEWORK FOR THE WATER TREATMENT INDUSTRY

ISO 55000 – What is it?

Why ISO 55000? – Environmental Pressures

Why ISO 55000? - Social Pressures

- Employee Engagement
- Employee Input
- Job Training
- Job Progression

Why ISO 55000? - Technical Pressures

- Transformation to interconnected digital technologies
- Asset Health Index development
- Use of Machine Learning or Asset Performance Management tools
- Use of risk-based inspection methods instead of periodic

Issues Encountered - Silos

Issues Encountered – Knowledge

Issues Encountered – Leadership

Issues Encountered – Governance

[illegible]

Why ISO 55000?

It provides a framework in which all necessary tools and techniques for business controls are integrated

Pressures:

Environmental
Social
Governance
Financial
Technical

Issues:

Silos
Knowledge
Competence
Leadership
Resources

Tools

Asset Management Policy
Strategic Asset Management Plan
Roles, Responsibilities and Authority
Baseline, Measure, and Monitor
Analyze and Evaluate
Audit
Financial Controls
Capital Planning
Conformity and Corrective Action
Root Cause Analysis
Preventive Action
Operations Program
Maintenance and Spares Program
Operational Readiness
Management of Change
Demand Forecasting
Contingency Planning

Benefits of Using ISO 55000

There are both internal and external benefits to good asset management.

External benefits tend to be the focus of most organizations because they directly impact customers, investors, constituents and regulators.

- Fostering stewardship and sustainability across all asset classes
- Reductions in operating costs to be more competitive or meet budget targets
- Improvements in safety results that reduce the likelihood and severity of accidents
- Advances in the performance and reliability of public works and private sector manufacturing and processing facilities
- Enhancing accountability and transparency for all stakeholders
- Extending the useful life and value of facilities and equipment

Benefits of Using ISO 55000

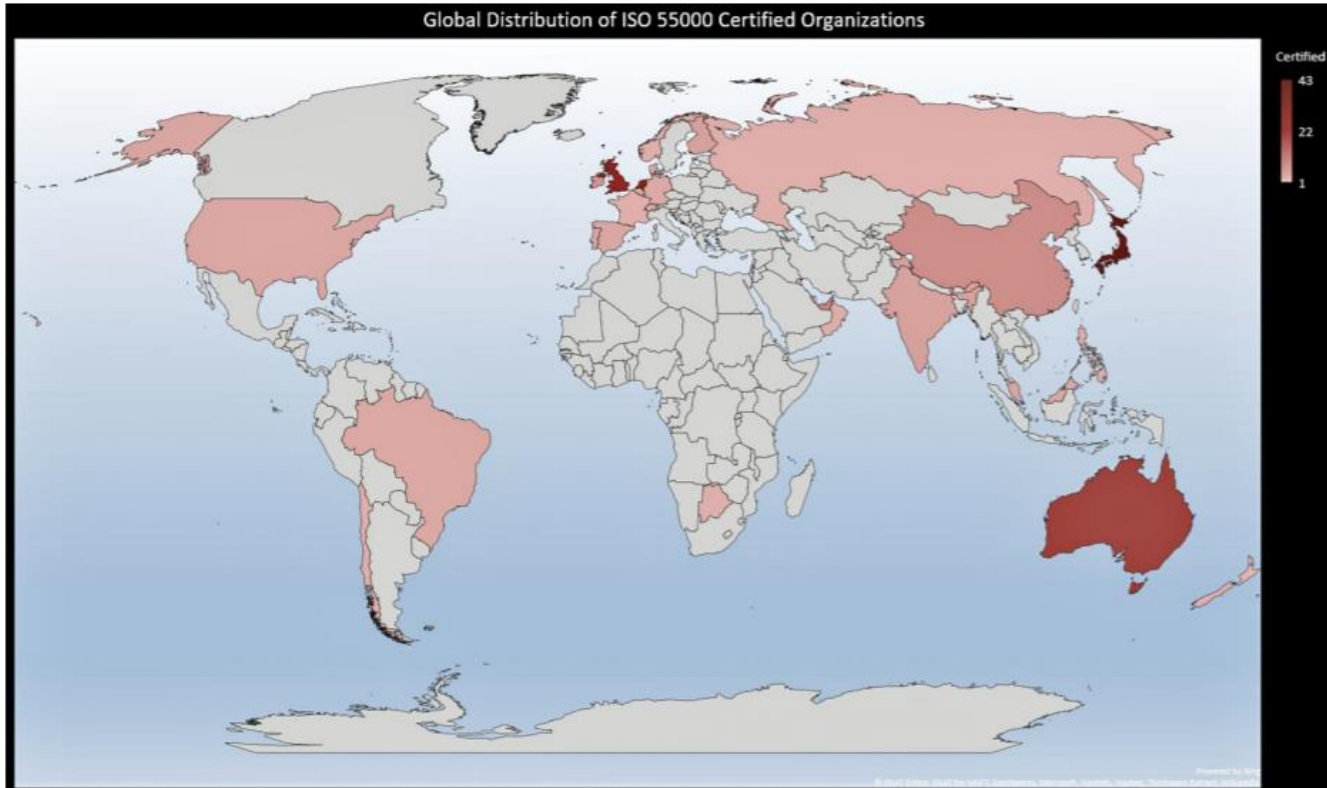

- Identify reliability weaknesses
- Develop mitigation plans

Benefits of Using ISO 55000

It tells your stakeholders that you **understand** your business, **know** your risks, and are prepared to **manage** them!

Moving to ISO 55000

As of September 2021, the list of ISO 55001 certified organizations was 304 in 46 countries operating in 21 sectors (up from 168 organizations in 2018).

<https://committee.iso.org/sites/tc251/social-links/resources/known-certified-organizations.html>

Australia has the highest number of certified organizations (60)

61 organizations are in the Water & Wastewater Sector. 29 of them are in Japan!

The most striking difference about these statistics is the poor showing by the Americas (0 certified); however, in the US many organizations choose to align with ISO 55000 but not certify.

Asset Leadership Network

www.assetleadership.net

Simplifying Physical Asset Management

Data Alignment

Establish data requirements to support organizational goals then capture the data, cleanse it and populate the systems

Performance Alignment

Visualize meaningful metrics and KPIs with line of sight to organizational objectives

Organization Alignment

Educate and engage leadership and stakeholders to align asset management objectives with the environmental, safety, and governance objectives of the organization

Process Alignment

Ensure consistent outcomes by standardizing asset management processes and training personnel

Future Alignment

Implement cost-effective APM and analytical capabilities and fully integrate systems to maximize knowledge while minimizing effort

How to Implement ISO 55000

A Phased Approach to Implement ISO 55000 Practices

Phase I

- Conduct a gap analysis
- Identify opportunities to improve
- Achieve consensus
- Prepare communication plan

How to Implement ISO 55000

- Phase II

- Asset Management Policy
- Strategic Asset Management Plan (SAMP)
- Roles and Responsibilities
- Project Plan
- Execute the Communication Plan
- Asset Management Plans (AMP)

How to Implement ISO 55000

- Phase III
 - Educate stakeholders
 - Measure progress
 - Adjust

How to Implement ISO 55000

- Phase IV
 - Certification
 - Continuous Improvement Process

All

ISSUED DATE:
August 2021

INQUIRIES TO:
Asset Management

REVIEW DATE:
August 2022

TOPIC:
Asset Management Policy

APPROVED BY:

President & CEO

Generic Energy Corporation (GEC) has a large and diverse asset and infrastructure base, including hydro-electric, solar, diesel, and LNG generation plants, substations, transmission lines and distribution networks. GEC has a responsibility to manage its assets over their entire life cycle to ensure the safe and reliable operation of the system which it operates to the benefit of the customers and investors. The accountability and responsibility for asset management extends from the executives to the front line workers and contractors through the pro-active application of the Physical Asset Maintenance Management System (PAMMS).

Objectives

GEC will be an industry leader in proactively managing electric utility assets consistent with the following business goals:

- Reliably supplying electrical energy in the service area
- Balancing asset performance with lifecycle cost
- Waste reduction
- Affordability for our customers
- Above average returns for our investors

Principles

GEC will manage its assets and Asset Management System (AMS) in accordance with industry leading practices to ensure:

- The Physical Asset Maintenance Management System (PAMMS) is aligned with ISO 55000 as well as corporate goals and objectives
- Maintenance is undertaken based on regular monitoring and analysis of the condition and performance of assets
- A lifecycle approach is applied to asset management decision making
- A balance of cost, risk, and performance are considered when planning to meet current and future needs
- Safe, efficient, sustainable, and cost-effective work practices
- Compliance with all applicable technical, statutory, regulatory, and policy requirements

Strategic Asset Management Plan

Description	Author	Checked	Approved

REVISION	DATE	DESCRIPTION	BY	DATE
1	2021	2021	2021	2021
2	2021	2021	2021	2021
3	2021	2021	2021	2021

Case Study – Roles and Responsibilities

Example RACI (not accurate)	Senior Vice President, Operations	General Manager, Maintenance	Reliability Manager	Reliability Engineer	Maintenance Engineer	CMMS						
CMMS Management												
Inventory Management												
Lifecycle Strategy												
Asset Lifecycle guidelines and strategies	A	R		C	C							
Validation of Asset lifecycle management throughout asset lifecycle	A	R		C	C							
Acceptance of assets from projects	A											
Guidelines for how to dispose of assets	A	R										
Asset operational checklists			C									
Risk Management (requirements, roles and responsibilities, process, assessments)	A	R	C	C								
Regulated activities (regulatory, industry standards)		R	C									
Supplier activities (management of suppliers for compliance)												
Maintenance activities (roles and responsibilities, guidelines for change control, etc)	A	C	C									
Replacement and retirement plan (replacement plan based on asset lifecycle)	A	C	R									
Cyber security (operational technology)	A	C		C	C							
Maintenance strategy digitalisation	A	C	R	C							C	
Service provider digitalisation	A		R	C					C			
Maintenance system refinement using digital technologies		A		R								
Performance Optimisation												
Organisational Readiness												
Reliability Strategy												
Work Management												

Case Study – Project Plan

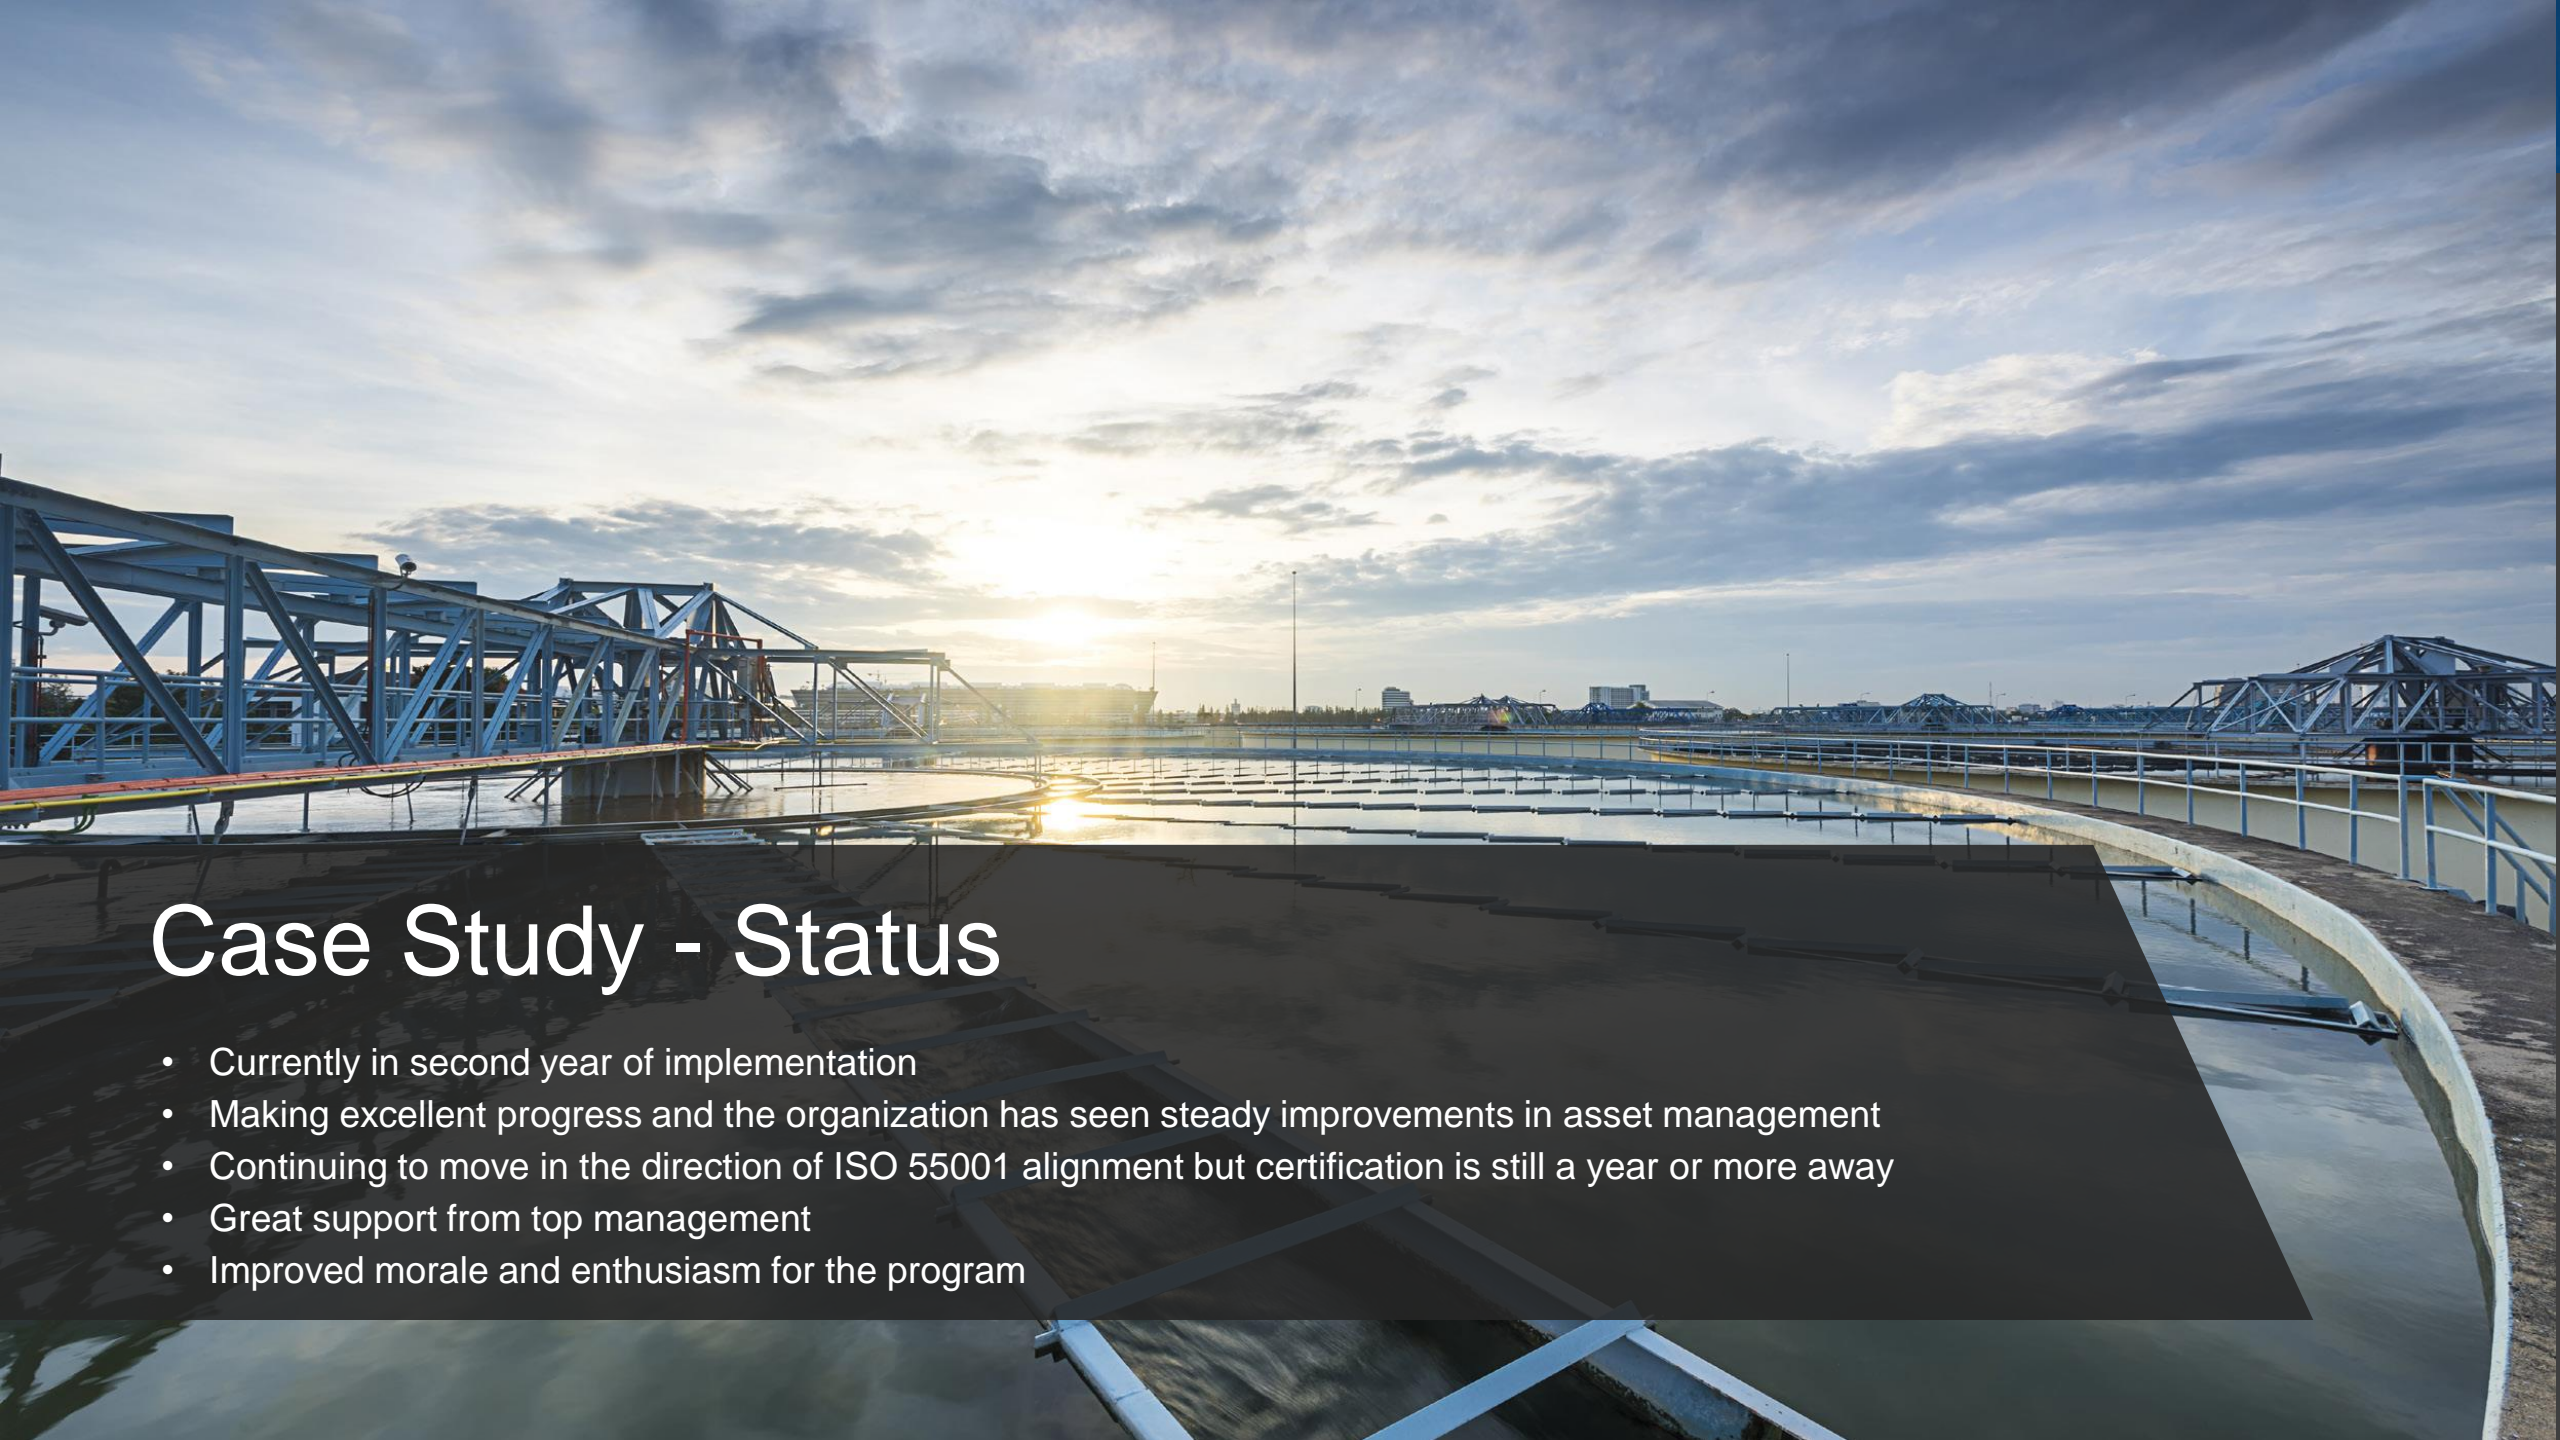

Task	Assigned To	Due Date	Prerequisites	Status
Physical Inventory Storage	NA	NA	OR.02	
Master Inventory List	NA	NA	IM.01-RS.04	
Spare Part Criticality Ranking	NA	NA	IM.02	
Spare Part Criticality Ranking: Sub-Component Tasks	NA	NA	NA	
Assign the team to govern the Spare Part Criticality Ranking strategy.				
Develop protocol for multiple factors to identify spare part criticality (for example, failure risk, item cost, lead time, demand).				
Develop a scope execution schedule to implement the Spare Part Criticality Factors protocol.				
Implement the Spare Part Criticality Factors protocol.				
Develop protocol for criteria to guide individual factor scoring.				
Develop a scope execution schedule to implement the Spare Part Criticality Factor Criteria protocol.				
Implement the Spare Part Criticality Factor Criteria protocol.				
Develop protocol for participation of multi-functional teams for factor scoring.				
Develop protocol for criticality score ranges between 1-10 or 1-100.				
Develop a scope execution schedule to implement the Spare Part Criticality Factor Scoring protocol.				
Implement the Spare Part Criticality Factor Scoring protocol.				
Develop protocol for criticality score classifications of low, medium, high, and critical.				
Develop a scope execution schedule to implement the Spare Part Criticality Ranking Classification protocol.				
Implement the Spare Part Criticality Ranking Classification protocol.				
Spare Part Criticality Ranking: Sustainability Tasks	NA	NA	NA	
Assign the team to govern the Spare Part Criticality Ranking Standard Methodology document.				
Develop the initial draft of the Spare Part Criticality Ranking Standard Methodology document for approval submittal (includes drafting, review, and revision).				

Case Study – Optimized Framework Sample

Physical Asset Maintenance Management System Framework			
Governance	Maint. Management	Engineering	Performance
AM Policy	Roles and Responsibilities	Management of Change	KPIs
SAMP	Maintenance Program	Capital Program	Metrics
PAMMS Governance Procedure	Procurement	Roles and Responsibilities	Audit
RACI	Warehousing	Root Cause Analysis	
	Skills Training	Asset Health Condition	
	Work Management		

Case Study – Asset Management Plans

Case Study - Status

- Currently in second year of implementation
- Making excellent progress and the organization has seen steady improvements in asset management
- Continuing to move in the direction of ISO 55001 alignment but certification is still a year or more away
- Great support from top management
- Improved morale and enthusiasm for the program

Questions?
