

Law Enforcement Sector Asset Leadership Success Strategies (SALSS)

Asset Leadership Network Policy Initiative

October 2021

Law Enforcement Asset Management Panel

Introductions

The National Asset Leadership Strategy

- The National Asset Leadership Strategy (NALS) outlined a decision support and organizing framework using proven structures and enduring principles to vastly improve asset management in the U.S. and allow for the impact of political exigencies.
- The Asset Leadership Network initiated this effort to enable federal, state, and local government to radically improve the value realized from the nation's assets.
- The ISO 55000 Asset Management System standards and other recent asset management standards provide a proven structure for a national strategy for the nation's assets.

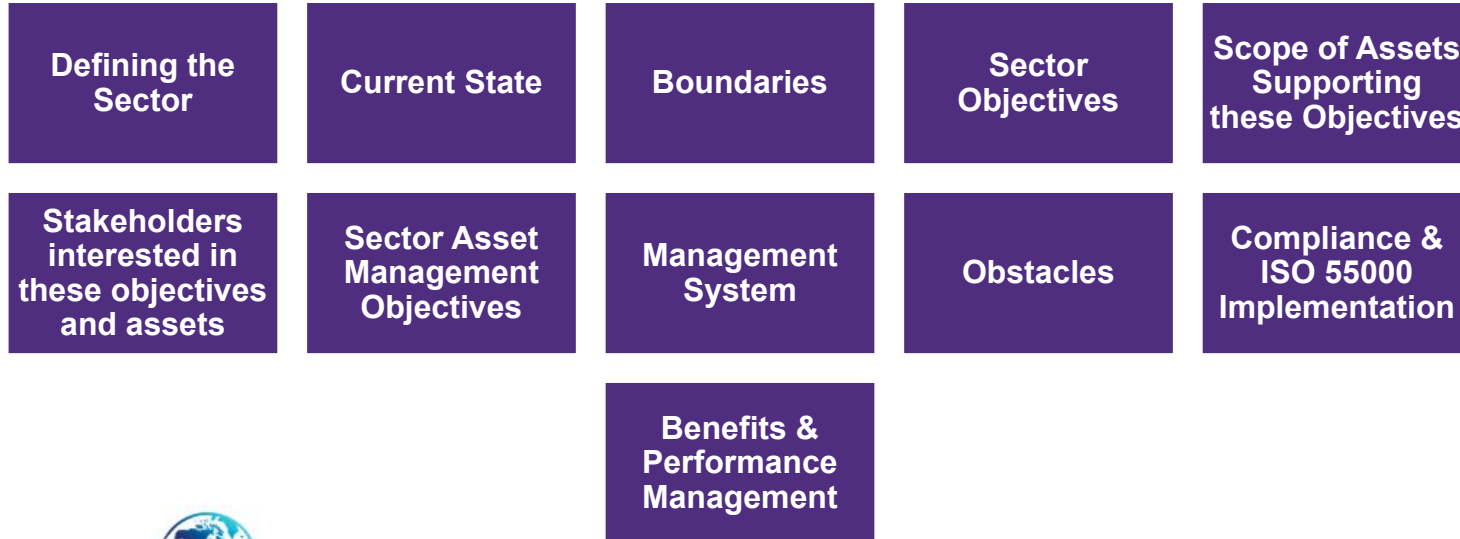

Benefits of a National Asset Leadership Strategy

- Informed asset investment decisions
- Managed risk
- Improved alignment to national goals
- Demonstrated social responsibility
- Improved stakeholder engagement
- Better lifecycle asset management
- Improved organizational sustainability
- Improved efficiency and effectiveness

What is the SALSS?

The Sectors Asset Leadership Success Strategies (SALSS) take the general policy guidance of the NALS and extend to a more operational focus at the sector level. The SALSS are developed via working sessions with asset management leadership across the sector of focus. Working sessions with sector leadership covers the topics below.

SALSS Topic Areas

Defining the Sector & Current State

The Federal Law Enforcement Asset Management community is a disparate sector spread across the Federal Government. **As of 2016, there were roughly 132,000 full-time law enforcement officers across the Federal Government.**

Sector Challenges

Lifecycle Management

- Tracking assets on global scale
- Data quality, visibility and availability

Enabling Technologies

- To enhance performance in unpredictable law enforcement environments

Standardization

- Uninterrupted tracking of assets
- Depth of asset tracking across supply chain

Training

- Training specific to acquisitions and project management

Accountability

- Need for increased stewardship role
- Preventative maintenance across asset management systems

Sector Strengths

Mobile tracking system

- On-going efforts to introduce new technology throughout the sector to improve accountability

Strong Workforce

- Excellent asset management employees and contractors at HQ
- Improving oversight at HQ and top-down communication with field

Increased Collaboration

- Sharing of space between federal and law enforcement employees

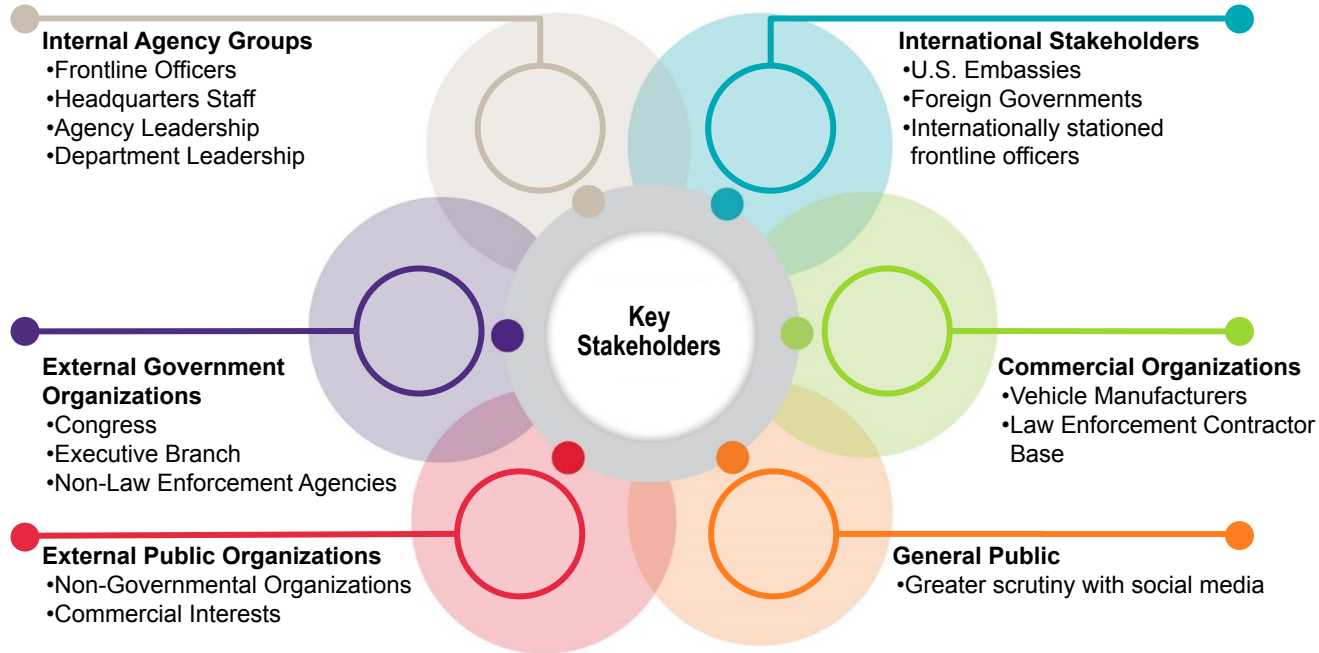

Professionalism

- Increasing understanding of asset management as a priority task, not a collateral duty.

Scalability of Systems

- At procurement level, systems in place to scale acquisition of assets

Key Stakeholders

Overarching & Asset Management Objectives

The primary mission of the Law Enforcement Asset Management sector is to **ensure frontline officers are equipped to meet an agency's law enforcement and national security mission**. The below objectives support this mission.

Efficient Asset Tracking

Accountability over Full Asset Lifecycle

Data-Driven Decision Making

Budgetary Cycle Tracking

Fiscal Oversight

Strategic Management of Assets

Tracking Benefits & Performance Management

American Society for Testing and Materials (ASTM) Standards

- The performance of the Federal Law Enforcement Asset Management sector can be measured against industry standards such as the American Society for Testing and Materials (ASTM) standards

ISO 55000 Principles

- The implementation of ISO 55000 principles in a Strategic Asset Management Plan (SAMP) will provide a framework to measure performance in the future. This includes developing sound performance metrics and scorecards that can measure progress against an organization's specific requirements and operating environment.

Data Quality Standards

- Ensuring high data quality across asset management systems of record will continue to be a crucial factor in making well-informed decisions and measuring the performance of organizations within the sector.
